**What's this module all about ?**

SmartMail is a XOOPS module for creating and publishing e-newsletters. It is fully integrated with XOOPS permissions, the XOOPS membership module, and can automatically pull content from any other module. Publication can be manual, or fully automatic (with a cron tab) on an admin defined reoccurring schedule.

**What's the current version ?**

Current version of the module can be downloaded here :

- SmartMail: [Zip Version](#)

**Where can I see this module in action**

There is currently no official demo site but the module should soon be used by The SmartFactory so you will be able to see it live !

**There is also a developpement site ???**

SmartMail has its own project on the [XOOPS Developers Forge](#). The different trackers are hosted there.
